

Farmyard Manure

How to prepare:

1. Collect cow, goat, or sheep dung from your farm or neighbours.
2. Allow it to **decompose fully** in a drum before use.

Usage:

1. Mix decomposed manure into soil before planting.
2. Can also be added around growing plants to boost soil health.

Why do farmers love it?

1. It is full of good microbes, which help keep the soil alive.
2. It strengthens roots, helping plants grow strong and steady.
3. It is completely natural and safe, with no chemicals needed.

Tip: Use only fully decomposed dung, not fresh one. Fresh dung can harm young plants.
