

Gau Kripa Amrutham

How to prepare

1. Mix all ingredients in a drum.
2. Stir morning and evening for 5–7 days.
3. Keep the drum in a shaded place, away from direct sunlight, and cover with a jute sack.

Usage:

1. **Foliar spray:** Mix with water and spray on leaves, preferably in the morning.
2. **Soil drenching:** Pour near the roots, preferably in the evening.
3. **Fertigation:** Add to the drip line after filtering well.

Why do farmers love it?

1. Helps plants absorb nutrients better.
2. Makes plants stronger against disease.
3. Softens the soil, making it airy and full of life.
4. Improves water absorption during rainfall.
5. Encourages helpful creatures like bees and earthworms to return.

Tip: There's no limit to reuse. This can be reused again and again. This works best with native cow dung and urine.
